# 1 Introduction

## 1.1 Overview

These notes cover material from the Algebraic Geometry course at University of Melbourne.

## 1.2 Prerequisites

- Linear Algebra
- Abstract Algebra (Groups, Rings, Fields)
- Basic Topology

# 2 Basic Definitions

**Definition 1** (Affine Variety). An affine variety is the set of common zeros of a collection of polynomials in  $\mathbb{A}^n$ .

**Example 1.** The unit circle in  $\mathbb{A}^2$  is given by  $V(x^2 + y^2 - 1)$ .

# 3 Theorems and Proofs

**Theorem 1** (Nullstellensatz). Let  $I \subset k[x_1, \dots, x_n]$  be an ideal. Then  $I(V(I)) = \sqrt{I}$ .

*Proof.* The proof follows from the correspondence between ideals and algebraic sets.  $\square$

# 4 Examples

**Example 2.** Example illustrating the concept with detailed explanation.

# 5 Exercises

**Exercise 1.** Exercise statement here.
